

Netflix Movies & TV Shows Analysis

TRENDS AND INSIGHTS USING SQL AND PYTHON

Anna Ajeeth

[Project@Github](#)

PROJECT OVERVIEW

- **Objective:** Analyze Netflix's extensive catalog of movies and TV shows
- **Tools:** SQL on BigQuery, Python (pandas, seaborn, matplotlib) for visualization, Canva
- **Data Source:** Netflix Movies and TV Shows dataset from Kaggle
- **Focus:** Distribution of content type, director popularity, country of origin, release years, and ratings

DATA EXPLORATION GOALS

**Understand Netflix's
global content
distribution**

**Identify top
contributors (directors
& countries)**

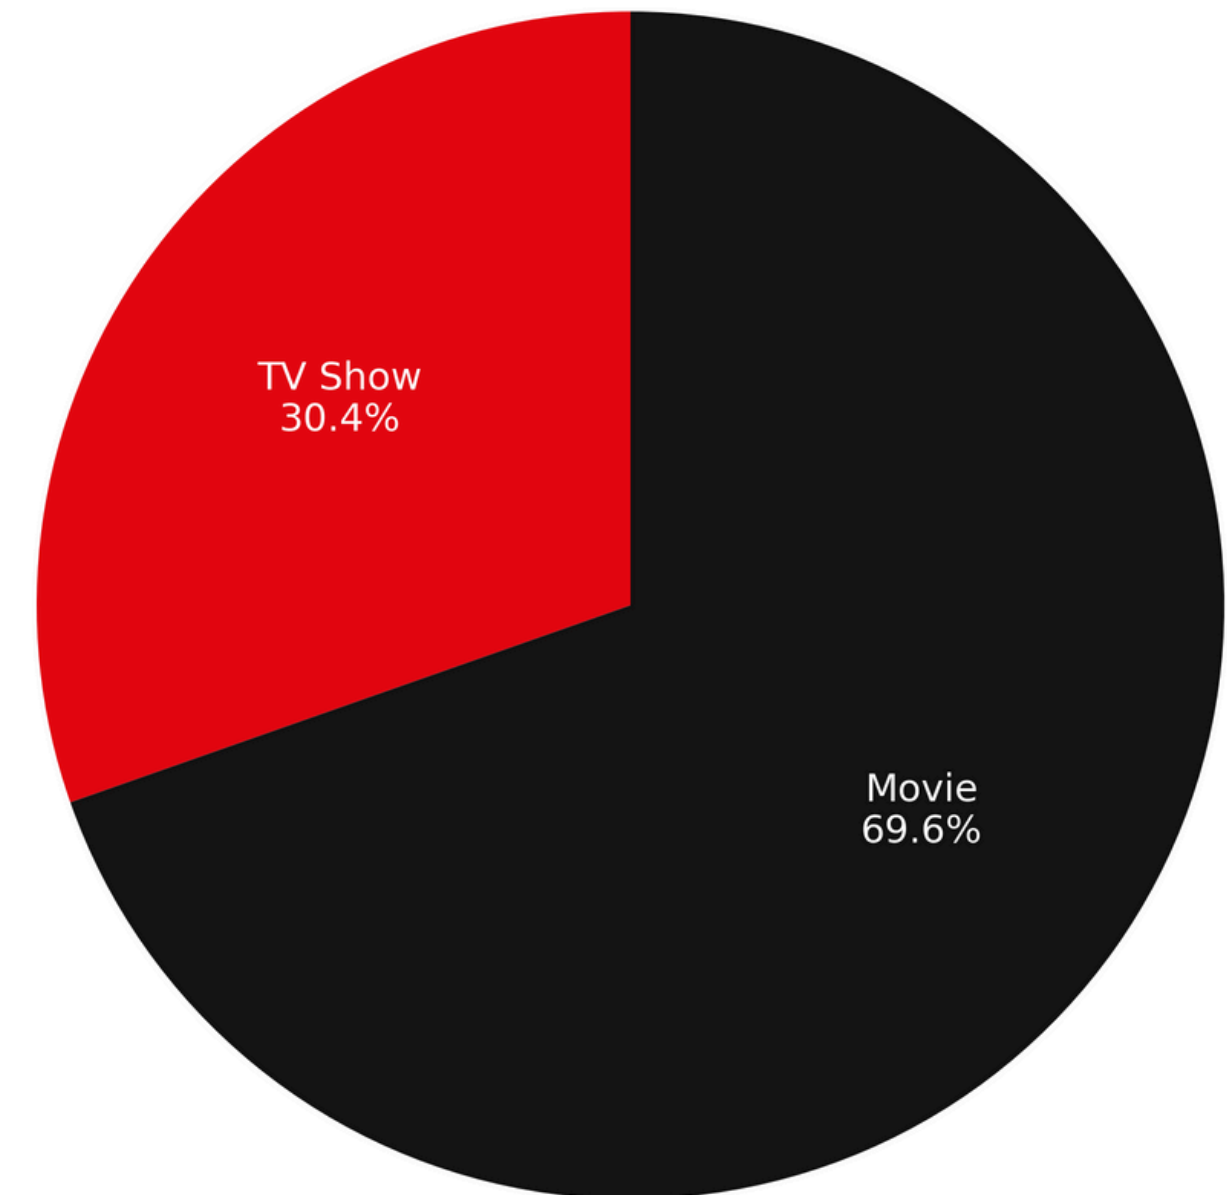

**Analyze release
trends over the years**

**Observe rating
distribution**

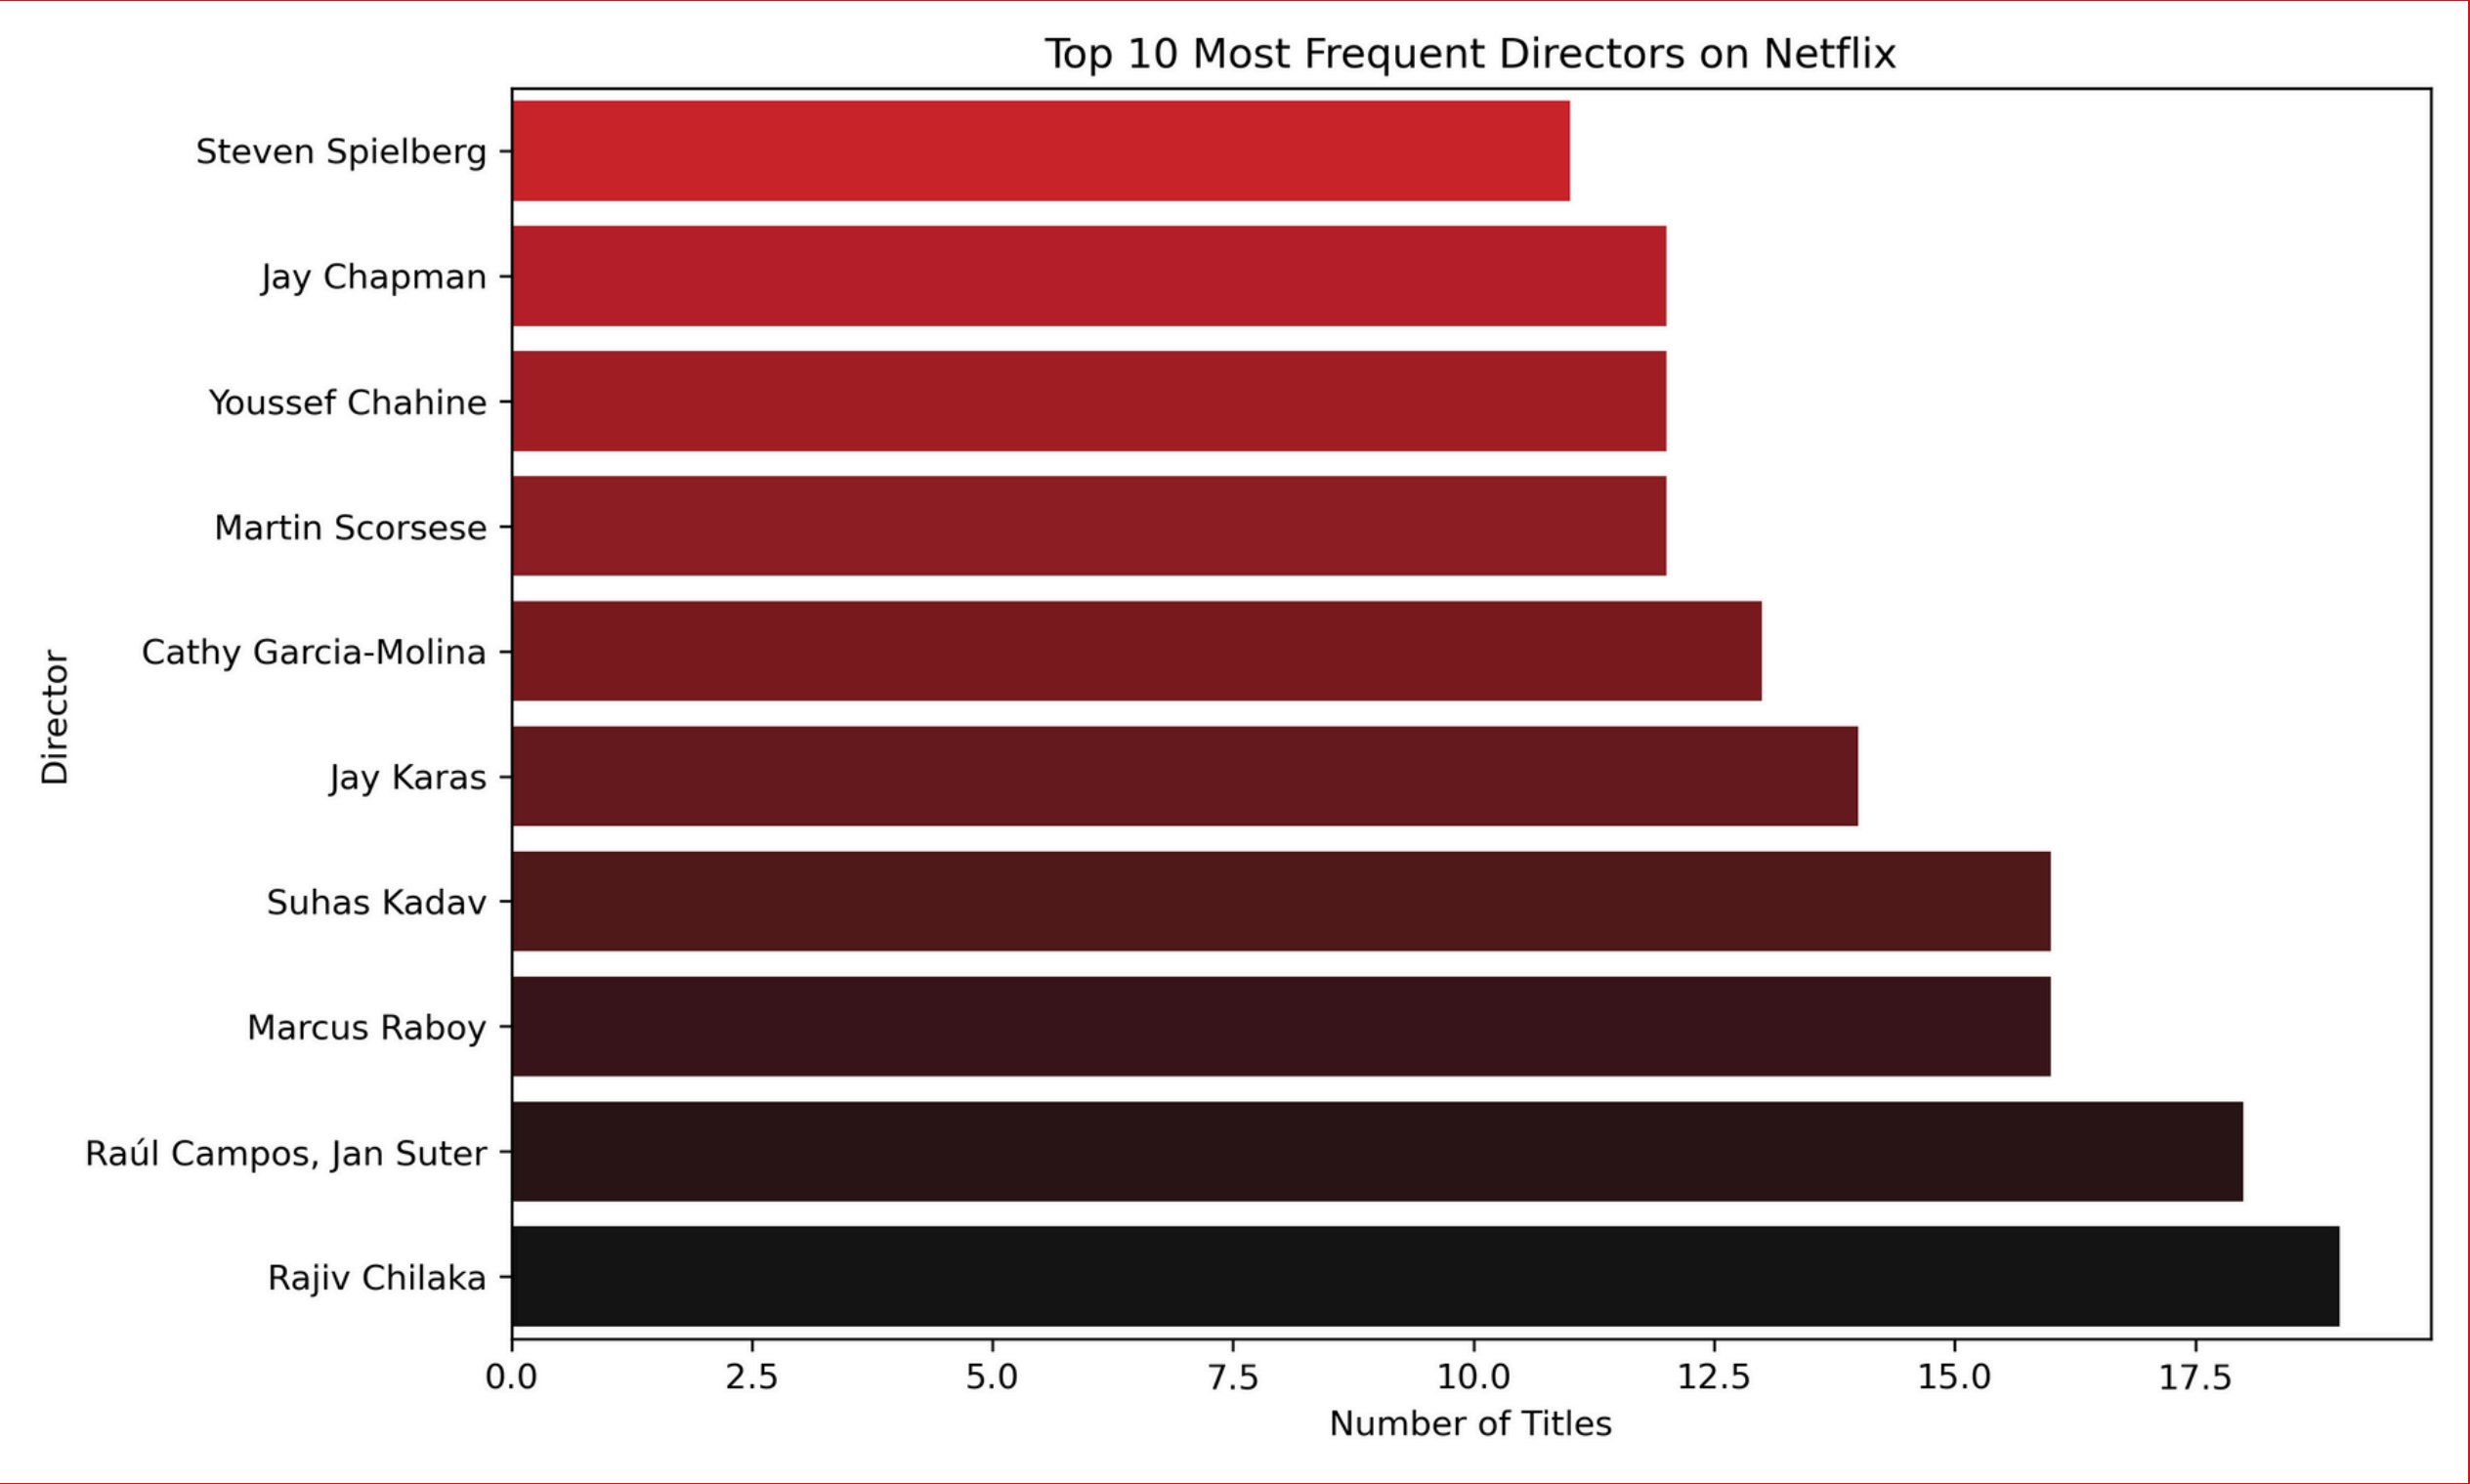

CONTENT TYPE DISTRIBUTION

Netflix hosts over twice as many movies as TV shows.

TOP 10 MOST FREQUENT DIRECTORS

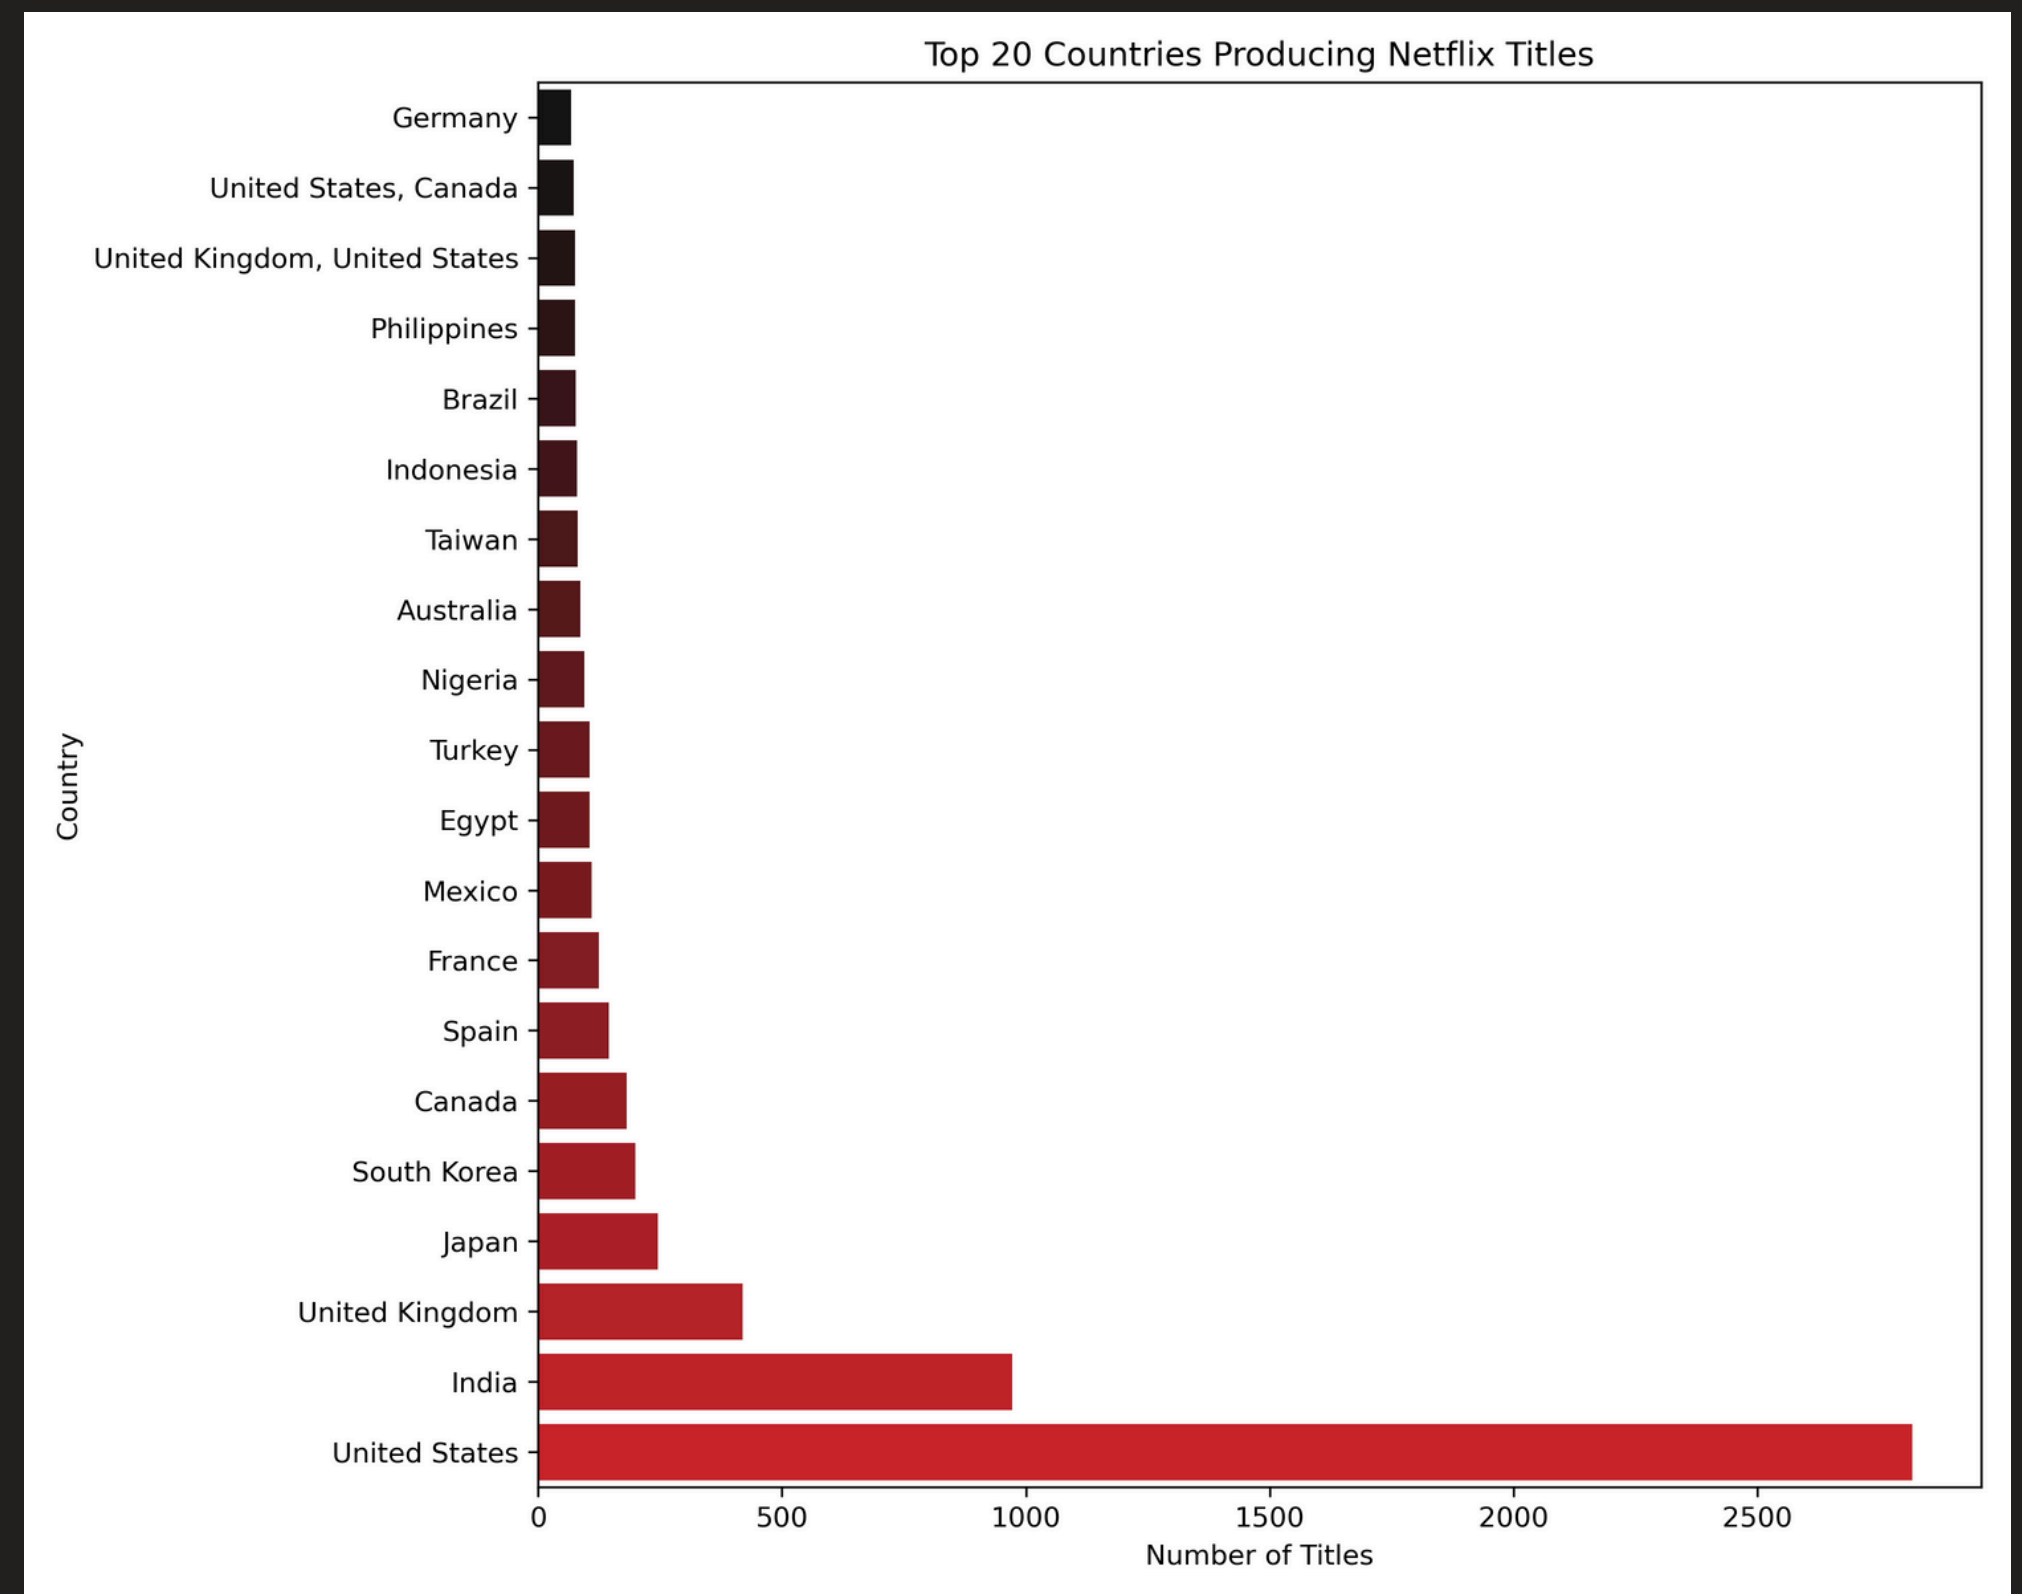

Rajiv Chilaka leads with 19 titles, mainly children's animation, Raúl Campos and others follow.

TOP 20 COUNTRIES BY CONTENT

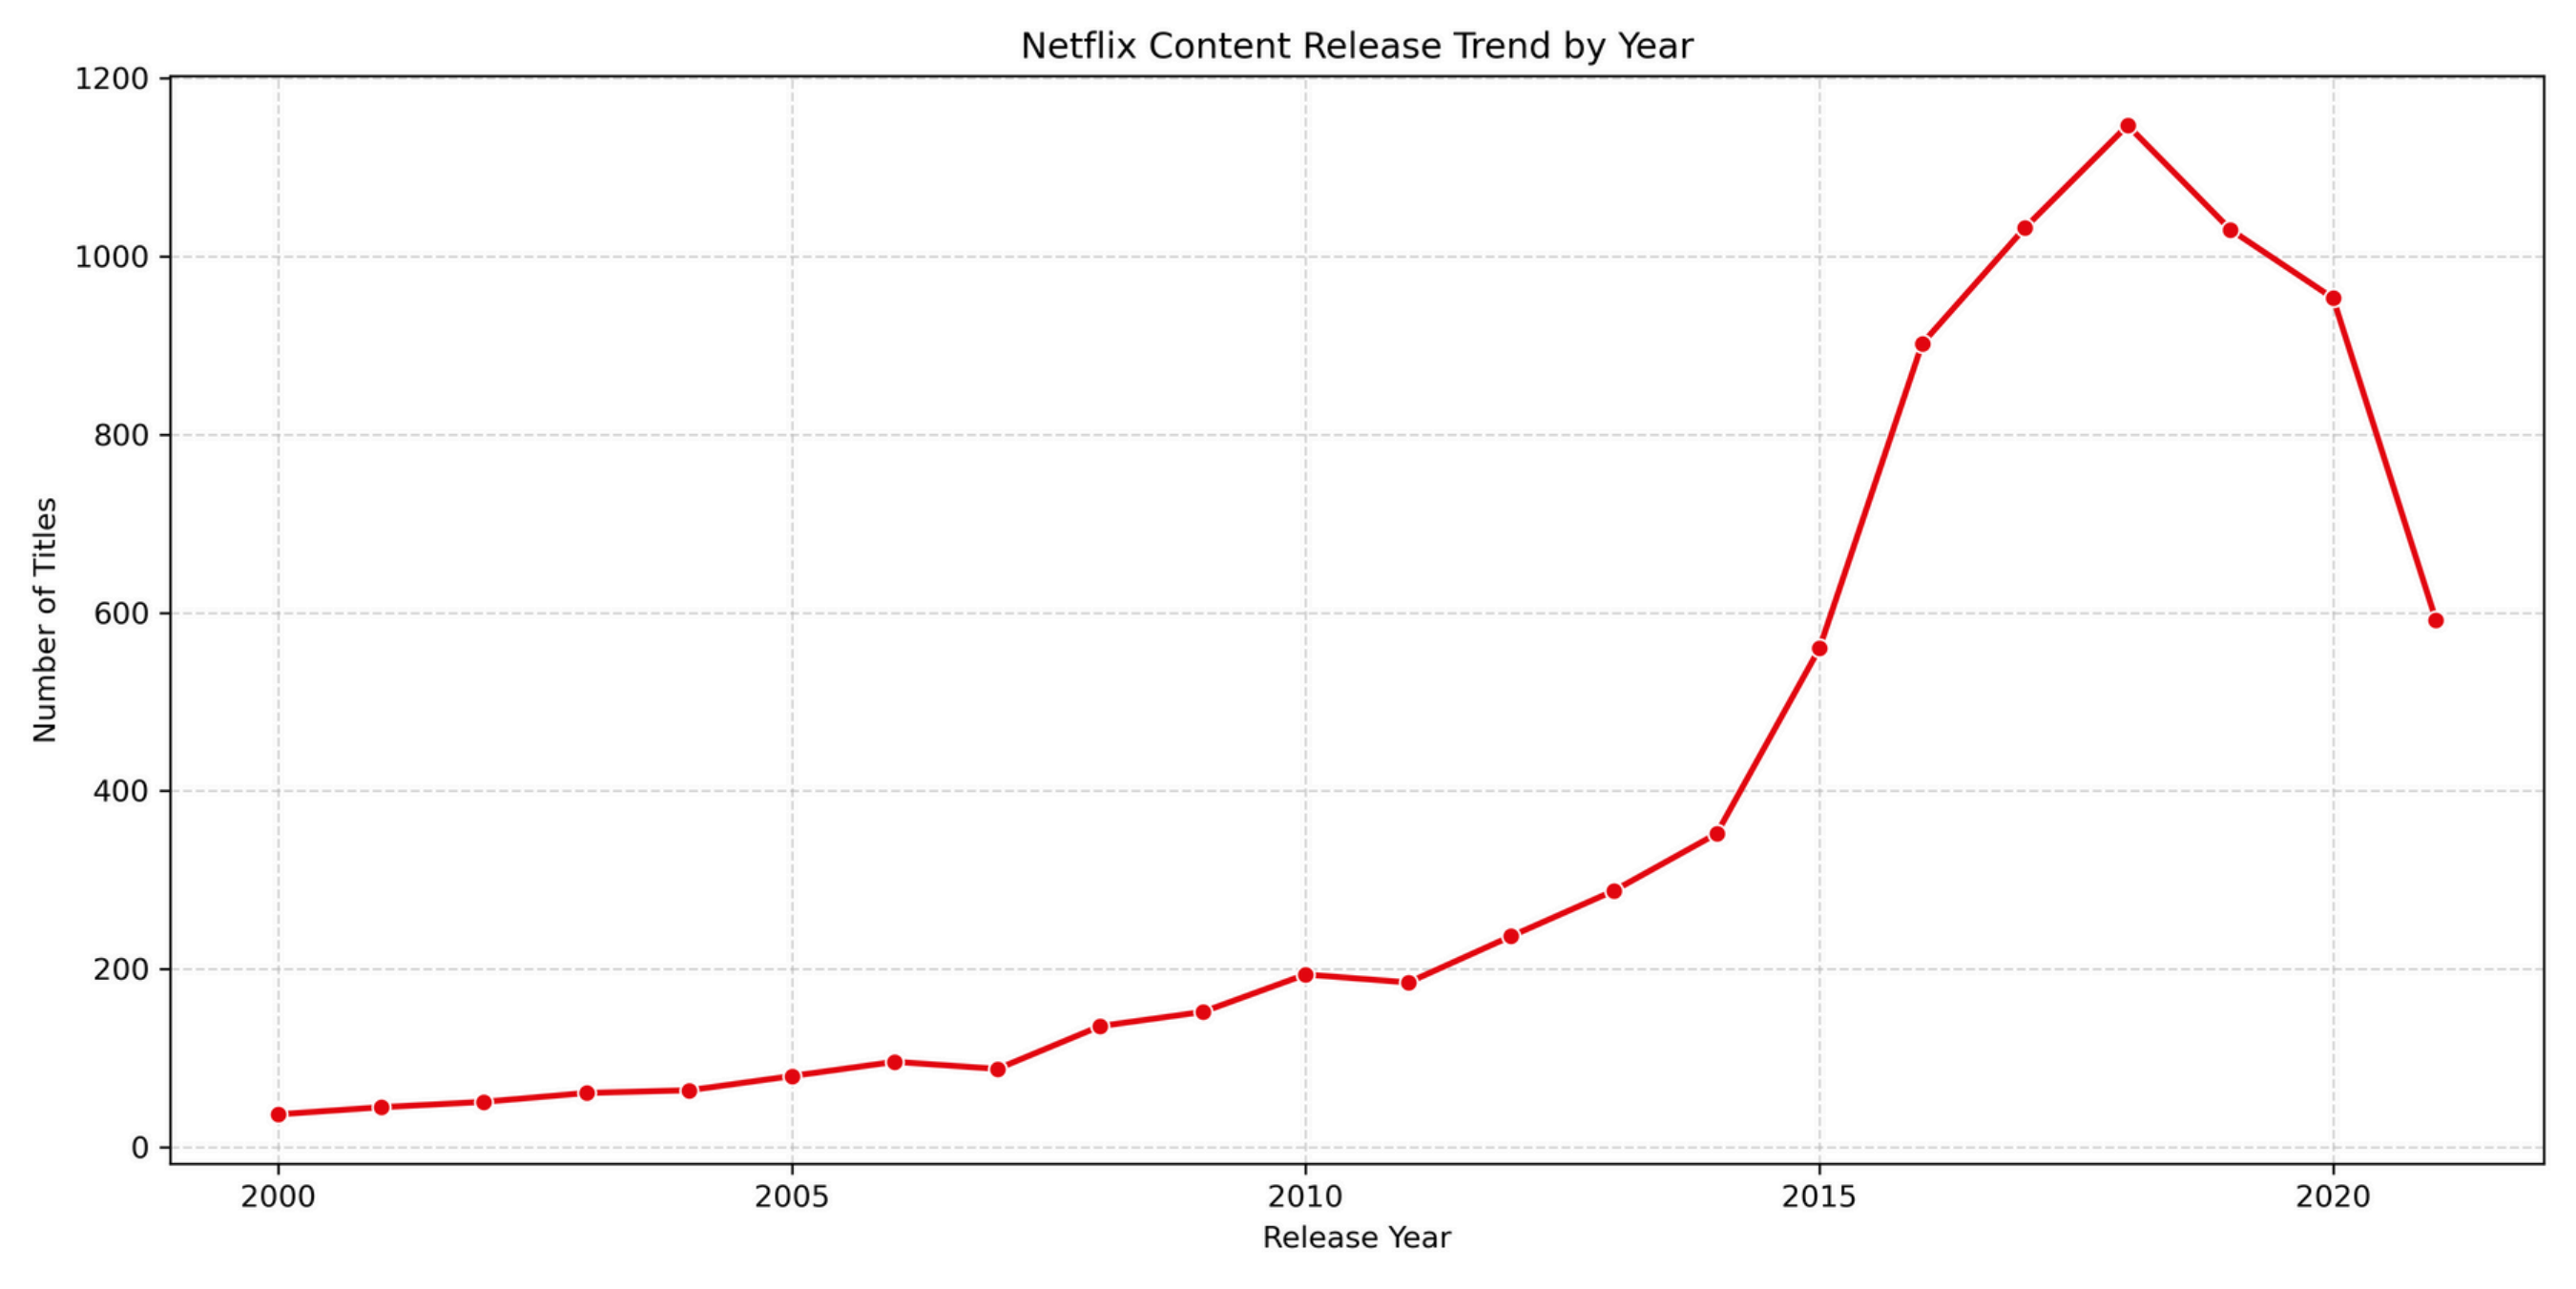

The United States produces the most content, followed by India and the United Kingdom.

This global distribution indicates Netflix's diverse international catalog, with heavy emphasis on US and Indian content.

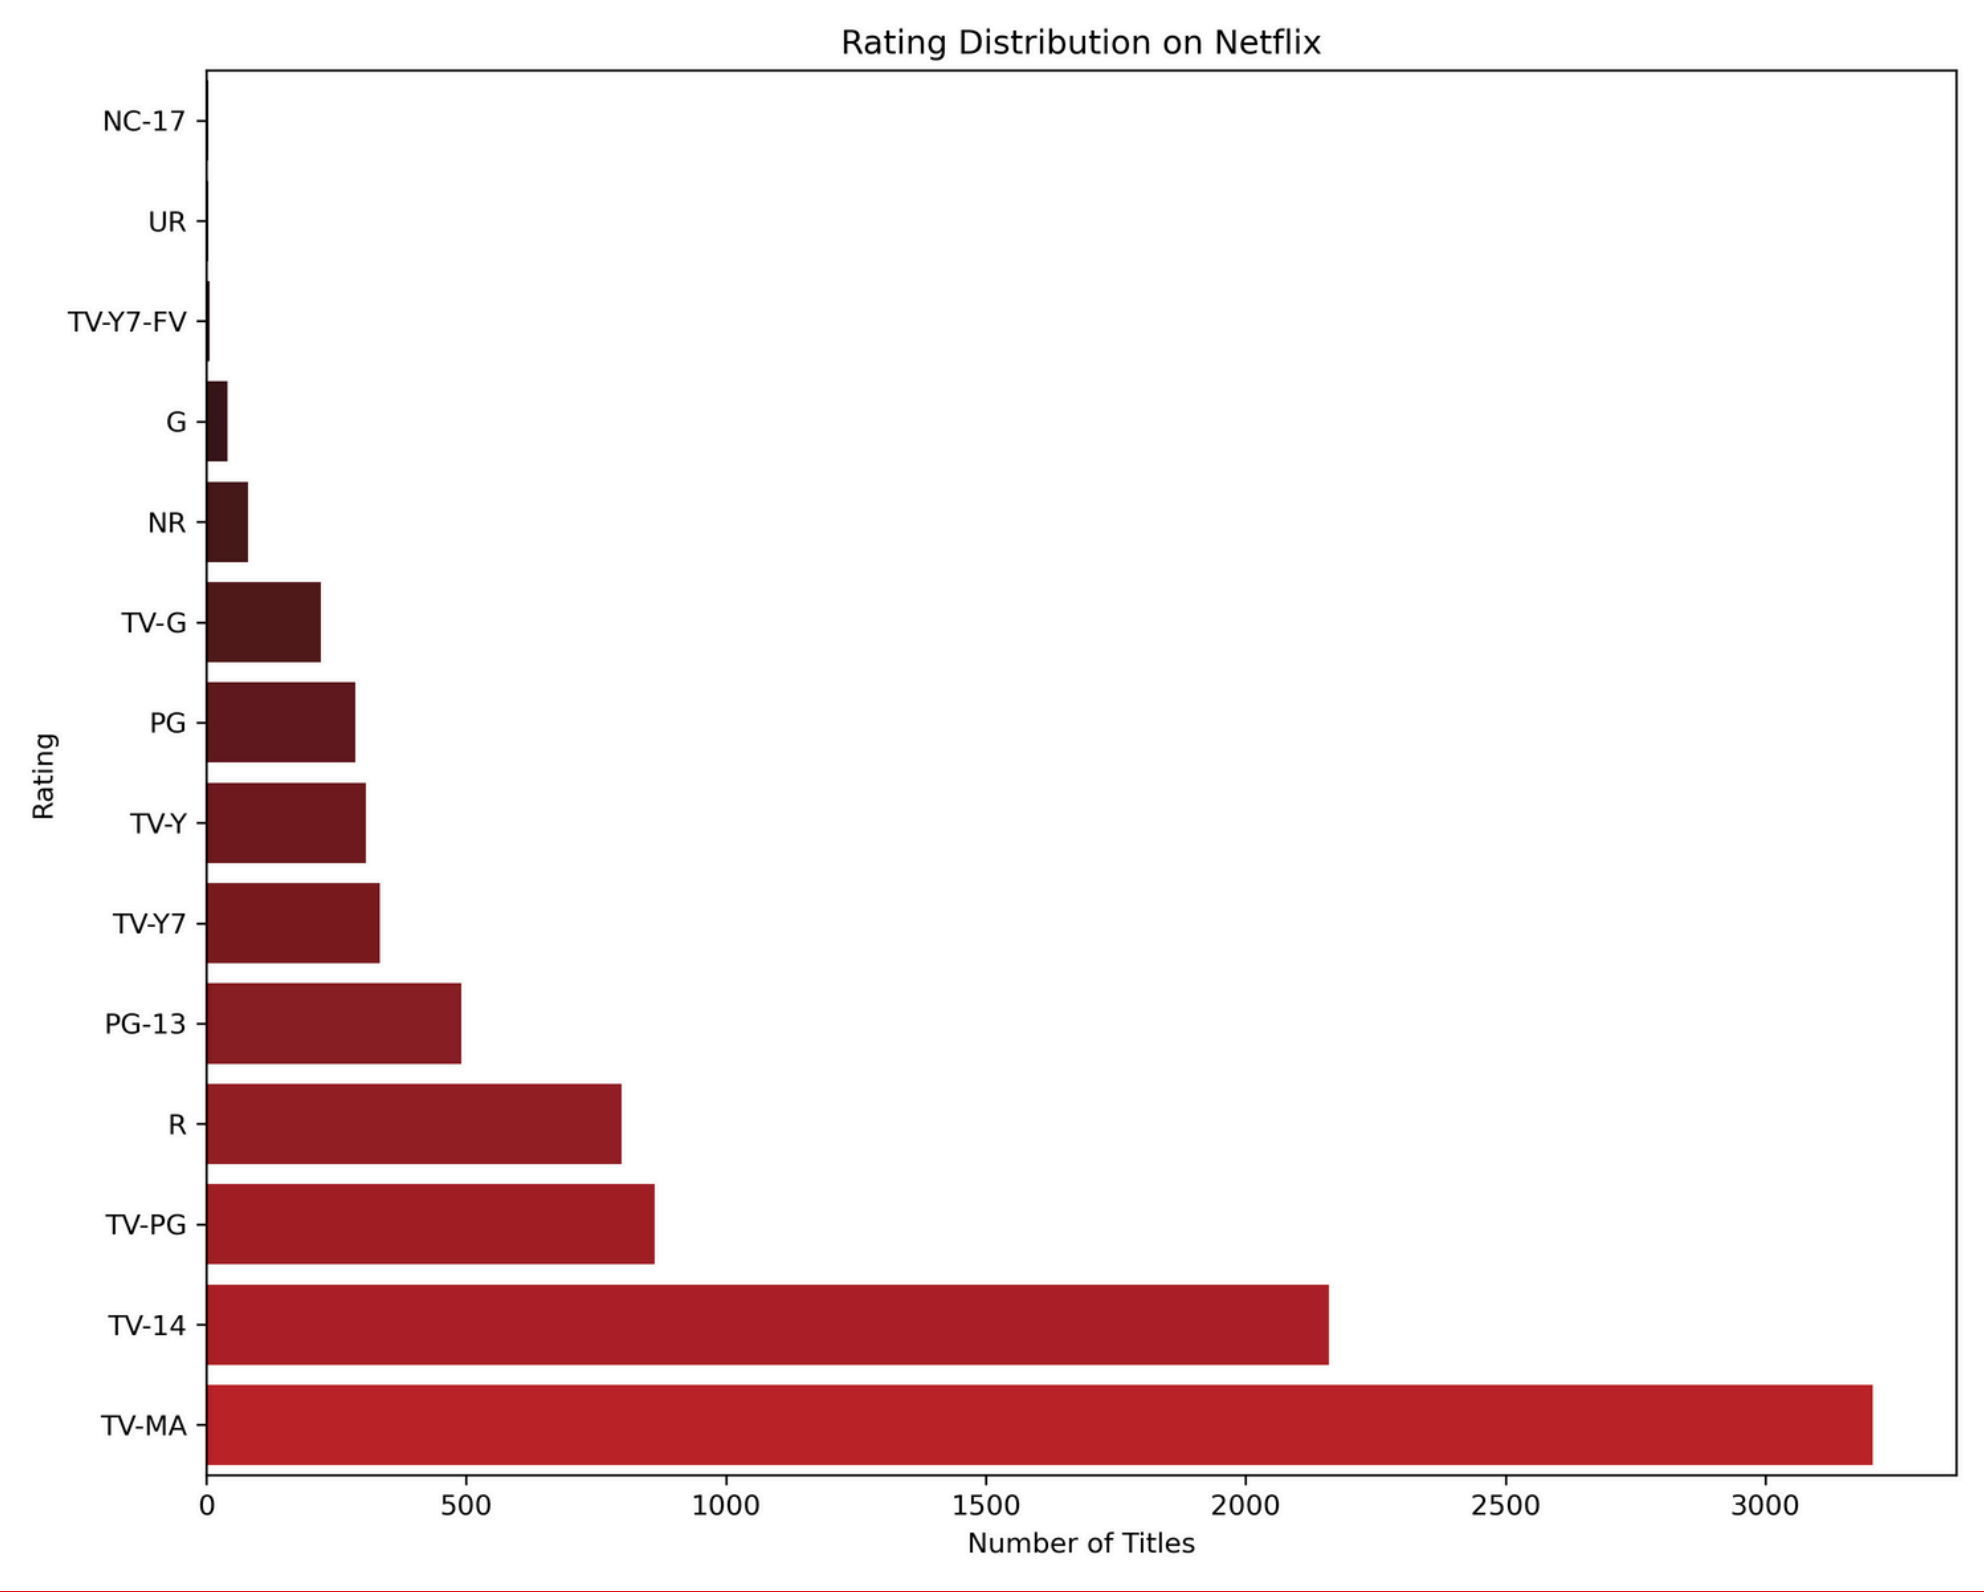

CONTENT RELEASE TRENDS BY YEAR

The streaming boom around 2015–2018 drove rapid content growth on Netflix, with a possible pandemic-related slowdown in 2020.

RATING DISTRIBUTION

Majority of content is rated TV-MA or TV-14, showing focus on mature audiences, with smaller portions dedicated to kids and general audiences.

KEY TAKEAWAYS

- Netflix offers a rich and diverse content catalog dominated by movies and mature ratings
- Top directors and countries highlight key content contributors
- Trends indicate growth with recent stabilisation
- Future analyses could include genre trends and viewer preferences
